FROM THE DECK OF THE CCTST DIRECTOR

The CCTST offers a competitive research program to support clinical research professionals as well as patient advocacy groups at a local, regional, or national level. This funding mechanism enables investigators at all levels to explore ways to improve the efficiency and effectiveness of the processes and methods used in clinical and translational research. This program is designed to support the development of innovative research projects that address the needs of patients and the healthcare system.

Four of the Step 1 applicants were awarded. Those applicants will be invited to Step 2 of the competition to develop a more comprehensive and detailed research plan.

In addition to the CCTST’s core funding opportunities, the Center also offers a variety of programs and grants to support innovative and collaborative research. These programs include the Pilot Translational Research & Innovative Core Grant Program, the Design Thinking Research Award, and the Innovative Core Grant.

The Pilot Translational Research & Innovative Core Grant Program supports investigators in the development of new and innovative translational research projects. The Design Thinking Research Award provides support for research projects that utilize design thinking methodologies to improve healthcare delivery and patient outcomes. The Innovative Core Grant supports the development of new and innovative core facilities and resources to support translational research.

The Center is committed to fostering collaboration and innovation in translational research and welcomes applications from investigators across all disciplines.

CORE REPORT: Clinical Translational Research Center

The Clinical Translational Research Center (CTRC) at the University of Cincinnati College of Medicine focuses on advancing the field of clinical and translational research. The CTRC collaborates with investigators across various disciplines to develop innovative research projects and training programs that address the needs of patients and the healthcare system.

Four of the five Just-in-Time (JIT) grants were awarded to investigators with a clear translational focus to build a local or networked infrastructure. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

In addition to the JIT grants, the CTRC also received funding to support the development of innovative research programs. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

The CTRC is committed to fostering collaboration and innovation in translational research and welcomes applications from investigators across all disciplines.

JIT-in-Time Grant Program

The Just-in-Time (JIT) program supports the development of new research programs and to provide resources for investigators to conduct their research. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

The JIT program is designed to support the development of new research programs and to provide resources for investigators to conduct their research. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

In addition to the JIT grants, the CTRC also received funding to support the development of innovative research programs. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

In addition to the JIT grants, the CTRC also received funding to support the development of innovative research programs. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

The Center is committed to fostering collaboration and innovation in translational research and welcomes applications from investigators across all disciplines.

PILOT PROGRAM UPDATES

Pilot Translational Research & Innovative Core Grant Program

The Pilot Translational Research & Innovative Core Grant Program supports investigators in the development of new and innovative translational research projects. The program is designed to support the development of new research programs and to provide resources for investigators to conduct their research.

In addition to the JIT grants, the CTRC also received funding to support the development of innovative research programs. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.

In addition to the JIT grants, the CTRC also received funding to support the development of innovative research programs. The funding was used to support the development of new research programs and to provide resources for investigators to conduct their research.
