“Bariatric surgery: It’s not what you think it is. Molecular mechanisms for the effects of surgery on obesity and diabetes.”

Learning Objectives:
1) Identify the similarities in the physiological effects of disparate bariatric surgical procedures.
2) Understand the impact of bariatric surgery on the regulation of iron.
3) Understand the mechanisms beyond mechanical restriction and malabsorption that account for the potent effects of bariatric surgery.

Randy Seeley, PhD
Henry King Ransom Endowed Professor of Surgery
Adjunct Professor, Internal Medicine
Adjunct Professor, Nutritional Sciences
University of Michigan

Date: Friday, May 10, 2019
Time: Noon – 1pm
Location: S1.203 (Children’s Hospital)

Lunch will be available for attendees, first come first served.
The seminar is eligible for 1 CEU for dietitians, diet techs, and other health professionals

This event is co-sponsored by the Surgical Weight Loss Program for Teens and the division of Gastroenterology, Hepatology, and Nutrition, Cincinnati Children’s Hospital Medical Center
